

Abstract Poster Numbers for CD Reference

Order to appear	Poster No.	Abstract Title
1	10001	Intraoperative intrinsic optical imaging of neuronal activity from Brodmann's subdivisions of the human primary somatosensory cortex
2	10003	Functional mapping of electric neuronal activity with zero localization error: standardized low resolution brain electromagnetic tomography (sLORETA)
3	10005	Simultaneous mapping of functional maps and axonal connectivity in cat visual cortex
4	10007	Quantitative imaging of various neurochemicals in the human brain using a brain mapping analyzer
5	10009	Gadolinium-based MR contrast enhancement effects on unfolding and thickness measurement of the human cortex
6	10011	Unshielded transcranial magnetic stimulation during concurrent PET does not affect the quality of PET data
7	10013	Noninvasive measurement of cerebral blood volume changes in depression and schizophrenia: A multichannel near-infrared spectroscopy study
8	10015	Variation in fiber spreading from the human corpus callosum: a statistical study on DT-MRI data
9	10017	Improvement of local BOLD sensitivities in the presence of susceptibility gradients by using tilted slices
10	10019	BOLD fMRI with minimal gradient acoustic noise
11	10021	A new technique for fMRI studies: single-epoch designs
12	10023	Comparison of statistical parametric mapping, geometric regions of interest, and anatomic volumes of interest for SPECT data analysis
13	10025	A portable near infrared spectroscopy system for mapping functional activation in infants
14	10027	A fast gridding algorithm for fMRI spiral scans
15	10029	Compensation of BOLS sensitivity losses induced by transcranial magnetic stimulation (TMS) coil susceptibility artifacts in combined TMS/fMRI echo-planar imaging
16	10031	Day-to-day variation of cerebral hemodynamics during cognitive activation: an fTCD study
17	10033	Quantification of noise due to subject motion in structural MR scans as an indicator of image quality
18	10035	Detection of multiple response peaks using iterative TCA techniques
19	10037	High-resolution T ₂ fMRI at high magnetic fields using PSIF
20	10039	Correlates of alpha rhythm in BOLD-fMRI
21	10041	Quantitative and qualitative analyses of cerebral glucose metabolic data in interventional brain mapping studies with FDG PET
22	10043	MEG signals from deep structures: Brainstem auditory evoked fields
23	10045	3D MR motion artifact correction with head tracking system
24	10047	Single line imaging spectroscopy (SLIMS): Investigation of the fMRI signal
25	10049	The temporal and topographical characteristics of cerebral blood volume change during a motor task: a 24-channel near-infrared spectroscopy study
26	10051	Event-related spiral fMRI for mapping of tactile somatosensory stimulus processing
27	10053	Cerebral blood volume activation pattern as biological substrate of personality: multichannel near-infrared spectroscopy study in healthy subjects
28	10055	Imaging of electrical currents: what matters most -- field strength or electronics?
29	10057	In vivo demonstration of improved temporal clustering analysis technique in fMRI
30	10059	Sensory stimulation requires a particular magnitude of neuronal activity, not a modular increment
31	10061	BOLD signal detection using 3D EPI fMRI during Go-No-Go task
32	10063	Asymmetric spin-echo imaging for reduction of susceptibility artifact in fMRI
33	10065	Implications of the ERP omitted stimulus response to "no-stim" events in fast-rate event-related fMRI designs
34	10067	Localization of interictal epileptic activity using spike-triggered functional MRI: Comparison with MEG source localization
35	10069	A DTI study of adolescents with disruptive behavior disorder
36	10071	Signal temporal instability correction (STIC) in fMRI
37	10073	Tracking growth hormone treatment with MRI relaxometry
38	10075	Evaluation of optimal wavelengths for optical topography
39	10077	Correlation between prefrontal hemoglobin oxygenation and reaching task performance: A near-infrared spectroscopy study
40	10079	Activation of the primary and association auditory cortex by the transition of sound intensity: An event-related fMRI study

41	10081	Simultaneous estimation of I_0 , R_2^* , and field map using a multi-echo spiral acquisition
42	10083	"Bay Zero" simulation explores methodology of mixed blocked/evented-related functional MRI experiments
43	10085	MRI experimental tools for PC oriented environments: Accurate control system with visual stimulus presentation and Response data acquisition
44	10087	A method to analyze the sensitivity to central k-space trajectory errors in spiral fMRI imaging
45	10089	Period of stabilization of EPI signal
46	10091	Single-shot quantitative T_2^* mapping with compensation of susceptibility gradients in multiple regions
47	10093	Hierarchical organization of neurons and brains with multiple spatial and temporal scales of nonlinear dynamics
48	10095	How to obtain distortion-free spin-echo EPI images: Application to diffusion tensor imaging (DTI)
49	10097	fMRI analysis with simultaneous measurements of optical topography during finger tapping
50	10099	Neuroimaging of musical hallucinations using spatially filtering MEG analysis: a case report
51	10101	Near-infrared spectroscopy can detect brain activity during a color-word matching Stroop-task in an event-related design
52	10103	Abnormal parallel cortical generation of high and low EEG rhythms in AD: A multi-centric LORETA study
53	10105	High resolution functional perfusion imaging at 3T using background suppression and surface coil
54	10107	Responses of striate and extra-striate cortex to hemi-visual field stimulation
55	10109	Comparison of modified MR methods in detecting auditory cortices
56	10111	Application of independent component model for analysis of cognitive functions using $[^{15}\text{O}]\text{H}_2\text{O}$ PET
57	10113	CDRSPM: Statistical parametric mapping of LORETA using high density EEG and individual MRI
58	10115	Extended mutual information registration for simultaneously correcting motion effects and eddy current distortion of single-shot echo-planar diffusion tensor imaging
59	10119	Functional signal recovery in EPI with the optimal compensatory gradient
60	10121	The sensitivity and specificity of BOLD fMRI for predicting essential language sites identified by ESM
61	10123	An in vivo method of defining anatomically distinct cortical regions using high resolution structural magnetic resonance imaging (MRI): A new approach to structure-function correlates of brain areas
62	10125	Diffusion tensor imaging assesses subclinical corticobulbar tract affection in patients with amyotrophic lateral sclerosis
63	10127	Relation between FDG-PET data and associated gray matter volume in normal human brain independently of partial volume effects: A voxel-based morphometric analysis
64	10129	Evaluation of MR data glove for motoric functional MRI studies
65	10131	Multivariate quantitative cytoarchitectonics. Laminar characterization of cortical microstructure by cell-type selection
66	10133	A level set method for the inverse EEG/MEG problem
67	10135	Estimation of R_2^* using extended rosette acquisition
68	10137	Optimal detection of perfusion and BOLD signals simultaneously using reversed spiral scanning at 3T: Functional contrasts and susceptibility artifacts
69	10139	Comparison of EEG and PET data in bilingual denomination task
70	10141	What is the optimum spatial resolution for fMRI?
71	10143	Estimation of undersampled respiration noise from image-domain multi-slice fMRI data
72	10145	Analysis of lesions by diffusion tensor tracking of underlying neuronal pathways
73	10147	SAR computations in a realistic and high-resolution model of the head with EEG electrodes in place
74	10149	Infant brain mapping by event-related functional near-infrared-spectroscopy
75	10151	Extraction of sulcal ribbon using template of deformable contour model and a prior knowledge
76	10153	Hybrid registration combining feature and intensity similarities with a Bayesian framework
77	10155	Internet-accessible daemon for the probabilistic anatomical labeling of brain structures in ICBM standard coordinate
78	10157	Single trial detection of beta band event-related synchronization in finger lifting task using principal component analysis (PCA)
79	10159	Cogent 2000 - A Matlab based Cognitive Interface
80	10161	Optical topography image mapping on 3-dimensional brain surface
81	10163	Non-invasive exploration of early visual processing in human by MEG & fMRI
82	10165	Automated synchronization of fMRI stimulus presentations and image acquisitions
83	10167	Thalamocortical diaschisis : Following unilateral thalamotomy for advanced essential tremor on $^{99\text{m}}\text{Tc}$ -ECD SPECT using SPM
84	10169	Multi-voxels based information analysis system: MvIA
85	10171	Cortical response in functional activation studies of the brain: Can we rely on the vascular response alone?
86	10173	Comparing spatial discrimination of perfusion and bold fMRI
87	10175	An MRI volumetric and a voxel-based morphometric study of the brain in healthy elders using Statistical Parametric Mapping
88	10177	High b value diffusion MRI in evaluating white matter diseases
89	10179	fMRI of the responses to digit tip and digit base vibration
90	10181	Physiological noise in multi-shot functional MRI
91	10183	Selection of voxel size and slice orientation for fMRI of the amygdala
92	10185	Reproducibility of spatial patterns of physiological noise characteristics in repeated fMRI acquisitions
93	10187	Variation of motion parameters as to task in fMRI acquisitions
94	10189	A comparison of R_2^* changes and low frequency BOLD fluctuations at 3T and 1.5T
95	10191	Skull stripping: A comparison of three automated algorithms
96	10193	Enhanced activation from image-space estimation and filtering of respiration noise
97	10195	The relative effects of hormones and sex chromosomes on the developing pediatric brain
98	10002	Posterior cingulate deactivation as a mediator of language system function
99	10004	Early parallel processing of auditory word and voice information
100	10006	The role of the left angular/supramarginal gyrus in Japanese Kanji reading: A transcranial magnetic stimulation study
101	10008	Pictorial depiction and verbal description of spatial relations activate distinct regions in the human brain: An fMRI study
102	10010	A functional MRI study of four different languages
103	10012	fMRI comparison of orthographic, phonological and semantic components of word recognition in English and Chinese
104	10014	Reading of words and perception of nonsense alphabetic strings activate distinct regions in the human brain: An fMRI study
105	10016	Exner's area and the frontal eye field were separately activated during language and saccade tasks
106	10018	Computational roles of temporo-parietal cortex in reading words
107	10020	The spatial and temporal signatures of word production components
108	10022	Increased anterior cingulate activity with task difficulty related to modulation of its regional effective connectivity
109	10024	Explicit and implicit processing of Kanji and Kana words and non-words
110	10026	Auditory cortical responses in cochlear implant users with different speech perception
111	10028	Functional mapping of reading: Is there a difference in male and female representation?

112	10030	A PET study on the production and comprehension of identical sentences
113	10032	Lateralized cerebral hemodynamics during discrimination of prosodic versus semantic emotion in speech: a functional transcranial Doppler ultrasonography study
114	10034	Neural pathways of overt speech in adults with developmental stuttering revealed by event-related fMRI study
115	10036	Near infrared spectroscopic mapping of human brain as an alternative to Wada test
116	10038	An fMRI study on common neural correlates of reading aloud and writing to dictation
117	10040	Auditory neuromagnetic brain responses to sudden interruptions in a spoken sentence
118	10042	Processing of multiple languages in the brain: an fMRI study
119	10044	The sensorimotor component of alphabetical character representation: a fMRI study
120	10046	Lateralized fMRI activation during rhythmic syllable production
121	10048	Comparisons of character-based paradigms with clinical fMRI in the prediction of Chinese language dominance
122	10050	Functional MRI study on writing Arabic numerals, Kanji numerals and numbers in Kana
123	10052	Differential language activation demonstrated by functional magnetic resonance imaging in twins discordant for a left frontal tumour
124	10054	Orthographic, phonological, and semantic processes of Chinese characters activate different brain regions: An fMRI study
125	10056	Mirror neuron system activity and audiovisual speech perception
126	10058	Cross projection of monaural monosyllabic audition in auditory cortex
127	10060	Brain activities in working memory process for phonologically ambiguous syllables: An fMRI study
128	10062	Functional segregation of Broca's region based on quantitative probabilistic cytoarchitectonic mapping of Brodmann's areas 44 and 45
129	10064	Do you speak English? A PET study in normal French subjects
130	10066	Categorical perception of auditory stimuli: An fMRI study
131	10068	Functional abnormalities associated with the FOXP2 gene mutation in the KE family: a covert language fMRI study
132	10070	Activity of right frontolateral cortex is mediated by the SMA in patients with brain tumors of the dominant hemisphere
133	10072	Modulation of cortical areas with repetitive transcranial magnetic stimulation to improve naming in nonfluent aphasia
134	10074	Functional correlates of gestural language acquisition in hearing adults
135	10076	An fMRI study of neuronal network for confrontation naming
136	10078	Female vs. male response to functional mapping of confrontation naming paradigm
137	10080	Overlap and dissociation of neural correlates involved in semantic processing of words and pictures in native Chinese speakers: an fMRI study
138	10082	Current density analysis on MEG responses of patients' dominant hemisphere during language-related task
139	10084	Event-related magnetic responses elicited by phonological incongruity
140	10086	Listening to sentences describing different motor actions activates the corresponding representations in the premotor cortex
141	10088	Difference in brain activation during hearing Japanese sentences containing grammatical error or semantic anomaly
142	10092	fMRI of writing and mirror writing in left and right handed subjects
143	10094	Neural correlates of speaking and writing letters and numbers
144	10096	Brain activation during transitive inference in stimulus equivalence formation
145	10098	Cortical activation during categorical perception of phonemes: enhancement by slowing down speech rate in developmental dyslexia
146	10102	Neural representations of Chinese word and pseudoword in a lexical decision task: An event-related fMRI study
147	10104	Differences between information processing of symbols and Japanese characters
148	10106	Brain mapping in semantic association of Chinese words revealed by fMRI
149	10108	Human brain mapping in semantic determination of Chinese words for animals and plants
150	10110	Printed word frequency effects on semantic judgment: A comparison between event-related and block designs
151	10112	Left planum temporale surface correlates with cortical activated network during language comprehension and production
152	10114	Language areas in the superior frontal gyrus
153	10116	Long-term follow up in a case of acquired deep dysphasia: an fMRI study
154	10118	Inter-hemispheric relationships of language areas and their interindividual variability
155	10120	Semantic and syntax: a combined ERPs and fMRI approach
156	10122	Speech processing cortical representation: invariance in left superior temporal sulcus and variability in Broca's area
157	10124	fMRI reveals differences between symphony orchestra musicians and non-musicians in cortical activation associated with semantic processing
158	10126	Comparison of event-related brain potentials (ERPs) to prosodic violations in speech and pitch violations in music for musicians and non-musicians
159	10128	Functional neuroimaging study of impairment in verbal ability and mental states of autistic patients
160	10130	Language lateralisation in children with basal ganglia infarctions determined using fMRI
161	10132	Reproducibility of the word frequency effect in a block design fMRI experiment
162	10134	Grammatical and extra-grammatical factors in the activation of traditional language areas
163	10136	An fMRI study of correlation between acupoints and brain cortical sites
164	10138	Functional anatomy of articulation
165	10140	Brain regions involved in motor control of speech
166	10144	Bilateral grey matter abnormalities in a family with a mutation in FOXP2
167	10146	Functional MRI of continuous overt speech production
168	10148	Functional reorganization of language areas in temporal lobe epilepsy: a fMRI study
169	10150	Neural networks for reading: a meta-analysis of 35 neuroimaging studies
170	10152	Effects of stimulus repetition during word reading on cortical activation patterns: an fMRI study
171	10154	Cortical networks that support causal inference processes during reading
172	10156	Path analysis of fMRI in bilateral language processing
173	10158	Neural plasticity of perceptual-motor mappings induced by learning of a difficult second-language phonetic contrast
174	10160	Inhibition priming by a sentence context
175	10162	Prosodic deixis (focus) and syntactic deixis (extraction) in LIFG and LSMG
176	10164	Analysis of verbal fluency in microstructurally defined stereotactic space: The role of Brodmann's areas 44 and 45
177	10166	Cortical processing of Chinese and English words by early bilinguals
178	10168	Functional MRI with overt verbal responses: A study using confrontational naming task
179	10170	A common frontal region that interacts with dissociated posterior regions during controlled retrieval of semantic and phonological information
180	10172	Language hemispheric dominance in patients with intraaxial lesions around language areas
181	10174	Measuring cerebral responses to duration based phoneme categories by near-infrared spectroscopy
182	10176	Syllable perception and ERP in developmental dyslexia
183	10178	Reversed lateralisation of temporal activation during speech production in thought disordered patients with schizophrenia
184	10180	Task effects on emotional word processing: ERP and behavioral evidence

185	10182	Functional imaging of brain activation due to vocalization with word production measured by NIRS
186	10184	fMRI study of intersubject variability and intrasubject reliability in different language tasks : a basis for interpreting cortical activations in aphasic patients
187	10186	The brain mechanism of affective meaning words
188	10188	Functional brain recovery from Chinese pure alexia
189	10190	The time course of semantic and phonological activation in reading Chinese: Evidence from an ERP study
190	10192	Semantic determination of Chinese words revealed by MEG and MRI
191	10194	Brain activity related to semantic processing during major depression
192	10196	Determination of language dominance using synthetic aperture magnetometry: comparison with Wada test
193	10198	An fMRI study of Taiwan sign language processing: Comparing brain images of signing and naming to pictures and words in deafs
194	10200	An fMRI study of speed reading
195	10202	Identifying neural correlates of phonological encoding and lexical processes: the role of visual familiarity
196	10204	Semantic processing and translation in Chinese "CEnglish bilinguals" brain: A fMRI research
197	10206	An fMRI study on competition and repetition during semantic retrieval
198	10208	Left opercular disconnection in developmental stuttering
199	10210	Brain activation during processing of Metaphors: an eFMRI-study
200	10212	Differences in cortical activation during sentence comprehension as a function of working memory capacity
201	10214	Semantics vs general knowledge processing
202	10216	Mapping visual word processing before children learn to read
203	10218	Mapping of cortical language areas in colour naming using fMRI
204	10220	An event-related fMRI study of printed word recognition with rapid presentation rates
205	10222	Brain activation of language translation: a fMRI study using Chinese/English word translations
206	10224	Effects of orthographic and phonologic priming during lexical decision: An fMRI study
207	10226	The functional neuroanatomy of reading acquisition
208	10228	Event-related functional MR of grammaticality judgments in an artificial grammar
209	10230	Grammaticality judgments in the Reber grammar activates Broca's region
210	10232	Neural substrates of retrieval of proper names after left anterior temporal lobectomy
211	10234	Implementation of response-event related fMRI for overt speech paradigms
212	10236	Neural correlates of retrieving noun-verb homophones
213	10238	Brain reorganization in Broca's aphasia: A longitudinal fMRI study
214	10240	Phonological processing in good and poor readers: An fMRI study
215	10242	Influence of reward and punishment upon spatial attention: Interaction between the limbic system and the spatial attention network
216	10244	Navigation expertise and the human hippocampus: a structural brain imaging analysis
217	10246	Feeding induced dopamine release in dorsal striatum correlates with meal pleasantness ratings in healthy human volunteers
218	10248	Affect and speech: an fMRI investigation of brain correlates underlying variation in range of pitch
219	10250	Memory- and emotion-related activations in encoding, recognition and consolidation of face-name associations: An fMRI study
220	10252	Role of amygdala in subliminal priming of valenced face: further fMRI evidence of affective priming
221	10254	Individual differences in verbal working memory: An fMRI study
222	10256	Neural substrates of human laughter revealed by PET
223	10258	Functional connectivity in mild cognitive impairment (MCI) using an fMRI marker
224	10260	Relationship between the amygdala volume and cancer-related intrusive thoughts
225	10262	Canonical correlation analysis and memory induced activity at hippocampus
226	10264	Multimodal semantic judgment
227	10266	Anterior hippocampal activation predicts successful memory for face-name associations
228	10268	Functional magnetic resonance imaging during assessment of gestures of emotion
229	10270	Thinking of the future and past: interaction between the frontal pole and the hippocampus
230	10272	Spatiotemporal characteristics of hemodynamic changes in the human lateral prefrontal cortex during working memory tasks
231	10274	Recognition of faces of a superficial acquaintance, a close friend, and one's own: event-related fMRI study
232	10276	Visual encoding and recognition: an event-related fMRI study
233	10278	Neural activations during encoding and recognition of words with and without emotion: An fMRI study
234	10280	Affect of emotional state on head movement in fMRI
235	10282	An fMRI study of memory retrieval for recent and distant personal and non-personal episodes, and personal and non personal semantic information
236	10284	Fuzzy logic approach to investigating the language dominance using near-infrared spectroscopy
237	10286	Neural substrates for autonomic response expression during Pavlovian fear conditioning
238	10288	The brain's response to emotional prosody in patients with bipolar disorder
239	10290	ERPs elicited to combined emotional and gestural movements of the face as a function of congruency
240	10292	Visualization of the motor and receptive language functions by combining MEG and fMRI - The potential advantage to Amytal test
241	10294	Affective modulation of gestural and visual speech stimuli: An ERP study
242	10296	Functional MRI of linguistic working memory: Difference between numbers and the Japanese syllabary
243	10298	Dynamic changes in the human hippocampus during memory Consolidation of face-name pairs
244	10300	Increased right temporo-parietal and middle frontal gyral activity with more associates, but fewer items in four paired associate recognition tasks
245	10302	Functional MRI study on working memory of phonology and orthography
246	10304	Correlations between cortical atrophy and episodic memory deficit in mild cognitive impairment (MCI) using voxel-based morphometry (VBM)
247	10306	Information-dependent cerebral reactivations during post-training REM sleep
248	10308	FDG-PET mapping of the brain metabolic correlates of episodic memory deficits in mild cognitive impairment (MCI)
249	10310	Neural Correlates of CO2-induced air hunger in high and low trait-anxiety volunteers
250	10312	Spoken cued-recall during event-related fMRI
251	10314	Superior digit memory of abacus experts: An event-related functional MRI study
252	10316	Different neural networks for spatial context memory of experiment-room and stimulus-location: A functional MRI study
253	10318	Specific hemisphere lateralization in alexithymia: measurements of brain activity during processing of emotional faces
254	10320	Neural mechanism for matching tasks using the faces of clearly expressed facial emotions and typical gender
255	10322	Neural networks for retrieving contextual information of real-world events: A PET study

256	10324	Forming associations between the present encoding and the predicted retrieval in the intentional learning: The role of MTL in perspective memory encoding
257	10326	Neural mechanisms of subliminal repetition priming on word stem completion task
258	10328	Serial position effects between baseline conditions and a recognition task
259	10330	Distinct roles of the basal ganglia and cerebellum in human reinforcement learning
260	10332	Manipulation of sequential verbal information in working memory causes neuronal interference effects similar to the effects of articulatory suppression
261	10334	Functional interactions between the medial temporal lobe and prefrontal cortex related to visual object recognition memory
262	10336	Beauty in a smile: medial orbitofrontal cortex and facial attractiveness
263	10338	Brain activity during differential acquisition and reversal of fear conditioning
264	10340	Event-related fMRI of working memory in schizophrenic and control subjects
265	10342	Actions speak louder than functions: The importance of manipulability and action in tool representation
266	10344	Recognition of fear in patients with medial temporal lobe epilepsy
267	10346	Encoding and retrieval of abstract paintings, faces and places: The role of intention
268	10348	fMRI hippocampus activations during a virtual morris water task and a virtual 8-arm maze
269	10350	Laughter and mirth in epilepsy
270	10352	Auditory working memory for voice location and identity
271	10354	Word fragment completion: dissociation of the BOLD response in prefrontal areas
272	10356	Context-dependent cortical activation in response to financial reward and penalty: An event-related fMRI study
273	10358	The neural network that subserved the refreshing of working memory buffer
274	10360	Stimulus class dependency of brain/behavior relationships in working memory
275	10362	Repetition suppression as a result of memory consolidation in episodic memory
276	10364	Chronometry of TMS interference on verbal working memory
277	10366	Interplay between emotion, error inhibition, and logic in the rightventromedial prefrontal cortex
278	10368	Prefrontal selection and parahippocampal reactivation at memory retrieval
279	10370	The neural representation of moral sensitivity: functional MRI of basic and moral emotions
280	10372	Brain areas associated with humor appreciation
281	10374	Differential activation of temporoparietal structures during recognition of famous names and that of personally familiar names: an event-related fMRI study
282	10376	Activation of the left parietal cortex during imagery of taste: an event-related fMRI study
283	10378	fMRI correlates of heart rate variability during cognitive and motor behaviour
284	10380	Gender effect on emotion recognition detected with functional magnetic resonance imaging
285	10382	Which kind of involvement of prefrontal cortex in episodic long-term memory? A multi-modal TMS-high resolution EEG study
286	10384	Human cortical responses to visuomotor working memory and no working memory tasks: A multi-modal fMRI-EEG-MEG study
287	10386	Temporal difference learning model accounts for responses in human ventral striatum and orbitofrontal cortex during appetitive conditioning
288	10388	Frontal and parietal activation in response to happy facial affect in schizophrenia: A BOLD fMRI study
289	10390	Differential fMRI activations to social reasoning paradigms in patients with PTSD pre- and post-therapy
290	10392	An fMRI study of remembering perceived and imagined pictures
291	10394	Plasticity of accumbens and orbitofrontal cortex during human cocaine self-administration
292	10396	Increasing cerebral activation with increasing memory load: An event-related fMRI study of working memory
293	10400	Activation of the rightorbitotemporal junction during reading a story: an fMRI study
294	10402	Modulation of activities in prefrontal and anterior cingulate cortices in the 'feeling-of-knowing' state
295	10404	The neural system that bridges reward and cognition in humans: an fMRI study
296	10406	Differential neural substrates of delayed match and non-match to sample

598 20052 Moving topograph for ERPs associated with terminations of saccades

599 20054 Human brain regions involved in visual motion prediction

600 20056 Mirror-symmetric tonotopic maps in the human primary auditory cortex revealed by event-related fMRI at 7 Tesla

601 20058 Increased demands on spatial reference frames activate right inferior parietal and premotor cortex

602 20060 ERPs differentiate between facial motion and motion in general

603 20062 Effects of stimulus Intensity on bone-conducted ultrasound perception revealed by neuromagnetic and psychoacoustic measurements

604 20064 An fMRI study of endogenous attentional shift caused by symbolic pointers

605 20066 Neural network for attention and working memory in patients with traumatic brain injury

606 20068 Is VEP-N1 the categorization primary index?

607 20070 Neural correlates of mimed and real action perception

608 20072 An investigation of global stereopsis in the visual cortex using multifocal visually evoked magnetic fields: A feasibility study

609 20074 Activation in the MT-complex during perception of stroboscopic displays: Effects of perceived simultaneity, motion, and succession

610 20076 Dynamic and static stereopsis-processing regions in human dorsal visual pathway

611 20078 The time course of neural processing for real and illusory contours

612 20080 Global effects of feature-based visual attention to direction of motion and color

613 20082 Event-related changes of the spontaneous brain activity during the perception of the 3-D structure from motion assessed by MEG

614 20084 Central processing mechanism for itch sensation investigated by a human PET study

615 20086 Speed of color perception in humans: an event-related potentials (ERP) study

616 20088 Evaluation of auditory pathway in deaf patients using magnetoencephalography

617 20090 Hemispheric asymmetries in extrastriate cortex during global / local processing

618 20092 Spatial and temporal dynamics of nonspatial attentional control: A combined fMRI and ERP study

619 20094 Effects of continuous masking noise on auditory evoked magnetic fields in humans

620 20096 Dynamic network of cortical interactions during audio-visual integration

621 20098 fMRI activation during the perception of depth corrugation aftereffect

622 20100 Distributed representation of information that distinguishes between individual faces and houses in ventral temporal cortex: An fMRI-adaptation study

623 20102 Spatial frequency channels in the human FFA support car expertise

624 20104 The human primary visual cortex knows where you are looking at

625 20106 Functional anatomy of auditory spatial attention as revealed by fMRI

626 20108 Functional variability in the calcarine fissure during mental imagery of drawings as revealed by fMRI study

627 20110 Human intraparietal activation during visual search for shape, color and motion: an event-related fMRI study

628 20112 Directing spatial attention in mental representations

629 20114 Detecting the deployment of the parietal attention system on single trials using fMRI

630 20116 Magnetoencephalographic (MEG) evidence for preparatory attention activity within the human primary visual cortex

631 20118 Searching for physical causality activates frontal cortex

632 20120 Brain areas involved in graphesthesia: Tactile sensation to letter recognition

633 20122 Spatially filtering MEG analysis visualizes parallel distributed processing during the Stroop task

634 20124 Feature-, object-, and location-based visual attention: An fMRI study

635 20126 Dynamic posterior parietal and primary sensorimotor cortical activation during expectancy of painful stimulation. An EEG study

636 20128 Conflicting phasic attentional processes related to cognition and pain expectancy: a psychophysiological study

637 20130 Differential effects of occipital low-frequency rTMS on visual induced alpha desynchronization and visual evoked potentials

638 20132 The effect of mental fatigue on frontal lobe function and visual task performance

639 20134 Temporal discrimination in the range of milliseconds using fMRI

640 20136 Functional networks of auditory selective attention

641 20138 Manipulation of temporal predictability in repeated somatosensory stimuli

642 20140 BOLD correlates of stimulus-visibility in early visual areas

643 20142 Subliminal somatosensory perception of electrical finger stimulation - An fMRI study

644 20144 The alternative perceptions of ambiguous figures correspond to a long-range system and two distinct cortical domains: an fMRI study

645 20146 Interrelationship between P300 and alpha rhythms in single trials of a visual selective attention experiment

646 20148 Varieties of cortical attention mechanisms during visual search

647 20150 Neural correlates of attentional feedback with frequent cue switches

648 20152 Hemodynamic response to faces remains stable until the ninth decade

649 20154 Human oscillatory brain activity within gamma band induced by the encoding of same- and other-race " faces "

650 20156 Rethinking cognitive activation experiments: From stimulus-response to script-report

651 20158 Echoic memory for auditory tones shows attention-dependence and handedness-gender interaction

652 20160 Familiarity of global stimuli influences perceptual processing of local stimuli but not response selection

653 20162 Function of self-face recognition in primary motor cortex: a [¹⁵O] H₂O PET study

654 20164 Cortical processing of audiovisual speech

655 20166 Extinction in a patient with auditory neglect: A PET study

656 20168 Integration of depth cues: a ERP study

657 20170 The anterior cingulate cortex and conflict monitoring: fMRI studies from a range of paradigms implicate inhibitory mechanisms in top down attentional control

658 20172 Neural activity in ventral extrastriate cortex during tactile discrimination of faces and other objects in congenitally blind and sighted subjects

659 20174 Human neural system for perceiving and attending to rotating 3D objects

660 20176 Differential visual attention scales directed by location versus semantic cue

661 20178 A functional MRI study in mental calculation using independent component analysis

662 20180 The attentional disengagement processing using the gap task: The target-locked and saccade-locked ERPs study

663 20182 fMRI analysis of lateral interactions in the human striate and extrastriate visual cortex

664 20184 Dissociation of auditory N100m into anterior and posterior foci using combined fMRI/MEG

665 20186 Cross-modal facilitation of lip-movement and hearing in speech processing: a PET study

666 20188 The role of EEG brain activities and sustained attention

667 20190 An fMRI study of covert orientation of attention

668 20192 Coincidence detection as the core process for interval timing in frontal-striatal circuits

669 20194 Measurements and analyses of brain magnetic fields evoked by bone-conducted sounds

670 20196 fMRI correlates of contingent negative variation (CNV): Modulation by volitional control of peripheral autonomic arousal

671 20198 Separation of the magnocellular activity from the parvocellular activity in the human lateral geniculate nucleus-A tentative fMRI study

672 20200 Crossmodal spatial influences of touch on visual areas take into account the current direction of gaze

673 20202 3-dimensional mental rotation in mathematically gifted adolescents: An fMRI investigation

674 20204 Differential cortical networks for directed tactile attention to local versus global object features

675 20206 The time course of brain activation during long-term perceptual learning

676 20208 What information is coded in human V4? - color/saturation itself or its change, and more? -

677 20210 What information is coded in human V4? - Opposite fMR signal change in a patient after recovery from cerebral achromatopsia -

678 20212 Crossmodal associative learning modulates fusiform face area's responses to sound

679 20214 Dynamics of brain systems underlying deployment of visual spatial attention

680 20216 Simultaneous ERP/fMRI recordings of the auditory mismatch negativity to frequency deviants

681 20218 Tactile imagery of Braille reading in blind subjects

682 20220 The functionally defined fusiform face areas discriminate unfamiliar from long-term familiar faces

683 20222 Activation of somatosensory, visual and motor areas during mirror-image discrimination of tactile stimuli: an fMRI study

684 20224 Onset of meditation in experienced vs. inexperienced subjects

685 20226 An fMRI study of visual search

686 20228 Activation of somatosensory, visual and motor areas during tactile discrimination of grating orientation: an fMRI study

687 20230 Cerebral BOLD fMRI activation patterns associated with sexual arousal response in normal women

688 20232 Spatial integration of audio-visual stimulation in retinotopic areas

689 20234 Transcranial magnetic stimulation of the frontal eye field improves conscious detection of visual targets

690 20236 Meaningless search

691 20238 Examining ERP data of faces versus objects under changes in viewpoint using computational analysis

692 20240 An fMRI study of switching attention between tasks

693 20242 Non-monotonic fMRI response to a motion discrimination task in human area MT

694 20244 Gender interacts with neural correlates of musical functions

695 20246 The effect of training on brain activity during the 'encode phase' of a visual delayed-match-to-sample task

696 20248 What information is coded in human V4? - Not only color, but also figure-ground segregation -

697 20250 Face-selectivity in the fusiform gyrus to highpass but not unfiltered images in a person with Asperger's syndrome

698 20252 Multivariate brain reading": Detecting and classifying distributed patterns of fMRI activity associated with visual object recognition and imagery "

699 20254 Audio-visual perception of natural objects

700 20099 A TMS study of the functional significance of ipsilateral motor cortical activation after stroke

701 20101 Functional brain reorganization for hand movement in patients with multiple sclerosis: defining distinct effects of injury and disability

702 20103 Discordance between progressive delayed brain atrophy and clinical recovery after middle cerebral artery infarction detected by intra-individual in vivo 3D MRI volumetry

703 20105 Neuronal substrate of memory failure in very early Alzheimer's Disease

704 20107 Optical intrinsic signal imaging in the preictal phase of seizures

705 20109 In vivo voxel-based morphometry (VBM) in multiple system atrophy (MSA)

706 20111 A segmentation method of human brain white matter using diffusion distance at 3.0 T MRI

707 20113 Functional anatomy of crossed cerebellar diaschisis

708 20115 Statistical parametric mapping for cerebral metabolism of glucose and clinical symptoms in progressive supranuclear palsy

709 20117 Simultaneous EEG and fMRI in epileptic discharges: BOLD response and localization

710 20119 Brain SPECT abnormalities in Alzheimer's disease revealed by atrophy correction

711 20121 Imaging post-stroke somatosensory recovery: Two serial fMRI case studies

712 20123 Effects of right hemispheric lesions on cortical activation patterns during auditory tasks: fMRI study

713 20125 Sensorimotor reorganization after early cortico-spinal tract injury: Different contributions of the unaffected hemisphere

714 20127 Effects of working memory training on brain activity - a case study

715 20129 Mapping cortical gray matter asymmetry patterns during normal adolescence and the effects of heavy prenatal alcohol exposure

716 20131 Delineation of sensory response in human cerebral cortex with intrinsic optical signals guides for neurosurgical operation

717 20133 Contralateral activation in early versus late stages of stroke recovery

718 20135 Functional imaging with low resolution electromagnetic tomography (LORETA) in cortical cerebellar atrophy

719 20137 Changes in cerebellar activation pattern during two successive sequences of saccades

720 20139 Influences of focal brain lesions on electrophysiological correlates of error processing

721 20141 Hand cortical representation areas reorganization induced by stroke: an MEG study

722 20143 Reorganisation of specialised auditory networks in a patient with progressive aphasia

723 20145 Presurgical fMRI: usefulness as perceived by the clinicians

724 20147 Neurophysiological and metabolic evaluation of the organization of cerebral sensorimotor areas in stroke patients: an MEG/fMRI study

725 20149 Pain induced cerebral perfusion changes in persistent vegetative state: a O¹⁵H₂O PET study

726 20151 Impairments in selective attention and anosognosia evaluated with the Counting Stroop Test in patients with mild Alzheimer's disease

727 20153 Ipsilateral prefrontal cortical activation in tonic cold pain:

728 20155 Topographic effects of event-related fMRI responses to non-painful vs. painful intramuscular electrical stimulation applied to the hand

729 20157 Mapping of differential topographic cerebral processing of subcutaneous vs. intramuscular inputs at the hand

730 20159 Dissociation of motor lateralization between WADA test and functional MRI

731 20161 Brain processing of cool and warm perceptions: EEG spectral topography and coherence analyses

732 20163 Differential cerebral responses to auditory aversive arousal and muscle pain: EEG topography and power spectra

733 20165 Motor cortex functionality in Alzheimer's disease: a transcranial magnetic stimulation study

734 20167 Language dominance assessment in the temporal lobe with a fMRI reading paradigm: results in normal subjects and postsurgical TLE patients

735 20169 Voxel-based morphometry demonstrates regionally restricted basal ganglia degeneration in early stages of Huntington's disease

736 20171 Correlation between lesion location and performance on the paced auditory serial addition test (PASAT) in relapsing-remitting multiple sclerosis

737 20173 Voxel based and ROI based statistical analysis of PET parameters as guides for surgical treatment of intractable mesial temporal lobe epilepsy

738 20175 Motor imagery and phantom sensations in paraplegic patients

739 20177 Normative data from an fMRI cognitive task battery

740 20179 Event-related fMRI of myoclonic jerks arising from dysplastic cortex

741 20181 Individual classification of Alzheimer's disease and depression by linear subspace analysis of FDG PET

742 20183 Correction of FDG-PET data for partial volume effect in Alzheimer's disease: comparison of different techniques

743 20185 Diffusion tensor imaging predict tissue damage in ischemic stroke

744 20187 Alteration of behavior and frontomedial rhythmic activity in demented patients involved in cognitive task

745 20189 Occurrence of speech disorders following surgical resection of the mesial frontal lobe: an fMRI study of the role of the SMA

746 20191 Follow-up of somatosensory recovery after stroke with fMRI

747 20193 Cortical origin of mini-asterixis in hepatic encephalopathy

748 20195 EEG-correlated fMRI of human generalized spike-wave activity

749 20197 Neural correlates of recovery from stroke in individual patients: a cross sectional fMRI study

750 20199 Voxel-based morphometry reveals progressive grey matter degeneration in temporal lobe epilepsy

751 20201 Entorhinal cortex volumes in Alzheimer's disease and control populations: Correlations with biologic and cognitive measures

752 20203 fMRI demonstrates rapid switching of brain function

753 20205 Spontaneous slow and fast wave activity in brain tumor patients localized by magnetoencephalography

754 20207 Dynamically spreading wave of gray matter loss visualized in Alzheimer's disease using cortical pattern matching and a brain atlas encoding atrophic rates

755 20209 Brain mapping of Alzheimer's disease, a combination study of X-CT, MRI, and PET

756 20211 Transcranial doppler and near infrared spectroscopy can evaluate the hemodynamic effect of carotid artery occlusion

757 20213 fcMRI of the hippocampus using the 'seed voxel' method: observations in normal subjects

825 20344 Morphology of somatosensory evoked fields: a parameter evaluating anatomo-functional neural connectivity

826 20346 A study of brain activation in volitional blinking with functional MRI

827 20348 Evaluation of a diagnostic tonic heat pain fMRI procedure with continuous rating of pain perception at four randomized stimulus intensities

828 20350 The effect of tone pulses with fluctuating inter-stimulus intervals on the elicitation of a GO/NO-GO response

829 20352 Cerebral activation by the signals ascending through unmyelinated C-fibers in humans: A magnetoencephalographic study

830 20354 Reorganization of the motor cortical areas induced by short-term sensory stimulation: a functional MRI study

831 20356 Measurements of local brain temperature changes in human cerebral cortex using functional thermography in patients with brain tumors

832 20358 Hand motor and sensory cortex in the deaf studied with fMRI

833 20360 Near infrared spectroscopy to monitor cortical activation during painful stimuli in newborn infants in intensive care

834 20362 Representation of the ear in human primary somatosensory cortex

835 20364 fMRI study of bimanual coordination of finger tapping and rotation

836 20366 Ipsilateral motor cortex activation during unilateral hand movements on fMRI is related to interhemispheric interactions rather than cortico-spinal projections

837 20368 Modulation of saccade related areas by performance of different saccade amplitudes - a fMRI study

838 20370 Rollvection vs. linearvection: Comparison of brain activations in PET

839 20372 Modulation of motor-related networks induced by low-frequency transcranial magnetic stimulation of the primary motor and dorsal premotor cortices: a TMS / PET study

840 20374 Brain activation during electric stimuli on acu-point revealed by MEG

841 20376 Passive movement, vibration stimuli with and without illusion of movement to elucidate cortical representation of deep somatosensory inputs in man

842 20378 Functional plasticity of the sensorimotor cortex after upper extremity amputation - A functional magnetic resonance imaging study

843 20380 Cortical activations induced by laser acupuncture of the foot (GB 43) in humans

844 20382 Functional magnetic resonance imaging of the sensorimotor cortex of the lower limbs by means of a force controllable actuator

845 20384 Functional connectivity revealed by single-photon emission computed tomography (SPECT) during transcranial magnetic stimulation (TMS)

846 20386 The role of human area MT/V5 for visuomotor control as evident from functional MRI

847 20388 Brain activity evoked by tool-use motor imagery: An fMRI study

848 20390 Music expertise influences rhythmic behaviour brain activation

849 20392 L-Dopa related changes in early Parkinsons disease: A fMRI study

850 20394 Modulation of somatosensory evoked fields due to repetitive nerve stimulation

851 20396 Attention differentially modulates functional magnetic resonance imaging and evoked potential amplitude in human somatosensory cortex

852 20398 Neuroplastic adaptation results in retention of cortical tissue in symphony orchestra musicians

853 20400 Application of fMRI to analysis of gait impairment in multiple sclerosis

854 20402 Contralateral coding of imagined body parts in the superior parietal lobe

855 20404 Multimodal sensory processing within human inferior parietal lobule (IPL) --- Epicortical recording study

856 20406 Neuromagnetic characteristics of ipsilateral primary somatosensory responses to median nerve stimulus

857 20408 Positron emission tomography study of a thalamic pain patient successfully treated with motor cortex stimulation

858 20410 The blood decreasing areas during hand grasping and voluntary swallowing: A functional MR imaging study with our count-down technique

859 20412 The effect of losing the primary sensory cortex. A case report using functional MRI technique

860 20414 Cortical activity in a precision grip-lift task with unpredictable weight changes

861 20416 Neural networks involved in learning novel vocal tract configurations

862 20418 Human sensorimotor cortical responses related to unilateral finger movements: An EEG study on bimanual competition

863 20420 Brain activation in stereognosis after median nerve injury

864 20422 Functional specialization within human sensory cortices and thalamus for pain: A single trial fMRI study

865 20424 Subcortical and cortical brain activity accompanying laser-induced acute pain and hot sensation

866 20426 Discrete central motor control of continuous slow finger movements

867 20428 Time course of cortical activation during voluntary movements as reflected by the hemodynamic response function

868 20430 Patterns of motor network activation during dominant or non-dominant hand auditory-cued or self-paced thumb-to-index tapping in aged healthy subjects: an fMRI study

869 20432 Age effects in a handgrip task using dominant or non-dominant hand: a functional MRI study

870 20434 Characterisation of cerebral activation patterns of the somatosensory system by fMRI in patients with solitary thalamic infarction

871 20436 fMRI-brain mapping of the external anal sphincter motor function

872 20438 Real time fMRI for presurgical localization of the motor cortex

873 20440 Functional imaging of human somatosensory afferent sites

874 20442 Brain activation during motor learning

875 20444 Temporal summation of MEG response to isoluminant red-green gratings

876 20446 Human stance control and its compensatory mechanism in normal and cerebellar ataxic subjects

877 20448 Abnormal recovery cycle in the right primary somatosensory cortex of dyslexic adults

878 20450 Different human primary and nonprimary somatosensory responses to electrical stimulations ranging from nonpainful to painful intensities: a MEG study

879 20452 Different networks are involved in saccade selection, preparation and execution: an event related fMRI study

880 20454 Functional MRI study about the brain activation when humans attemptmicturition

881 20456 Comparison of brain areas involved in affective versus sensory-discriminative aspects of pain: A PET study

882 20458 A double dissociation between brain regions controlling temporal and spatial aspects of movement sequences: An fMRI study

883 20460 Stronger activity in motor areas when humans execute unimanual as compared to bimanual movements of the index finger

884 20462 Brain regions involved in the control of the temporal structure of motor sequences

885 20464 Cortical representation of the anorectum in spinal cord injury patients

886 20466 Localization of the primary motor tongue area to the inferior central sulcus: A combined fMRI-anatomical study

887 20468 Multiplicity of evoked-cerebral blood oxygenation changes in the primary sensorimotor cortex of normal adults: studied by BOLD-fMRI and NIRS

888 20470 Localization of motor and language areas using functional MRI in patients with brain tumor: Comparasion with intraoperative electrical mapping

889 20472 Central processing with gastric fundus distension: A 3T-functional magnetic resonance imaging study

890 20474 Preferred tapping rate and maximum rate of tapping: another approach to the rate effect

891 20476 An FDG PET study of functional connectivity in deaf children and adults using cytoarchitectonically defined probabilistic map
